

OPERATING SYSTEMS CONCEPT – LAB

EXP – 02: STUDY OF UNIX EDITORS

A terminal window titled 'Terminal' with a timestamp of 'May 14 20:49'. The window shows a user named 'soordeen' at 'localhost' in the directory '~/ainhath/scripts'. The user has created three shell scripts: 'arithmetic.sh', 'evenorodd.sh', and 'date.sh'. They have made each script executable with 'chmod +x' and then run them. The 'arithmetic.sh' script prompts for two numbers and outputs their sum, subtraction, multiplication, and division. The 'evenorodd.sh' script prompts for a number and outputs whether it is even or odd. The 'date.sh' script simply outputs the current date and time.

```
[soordeen@localhost shellscrip]$ cat arithmetic.sh
#!/bin/bash
echo "Enter two numbers: " a b
echo "sum: $((a+b))"
echo "sub: $((a-b))"
echo "mult: $((a*b))"
echo "div: $((a/b))"
[soordeen@localhost shellscrip]$ chmod +x arithmetic.sh
[soordeen@localhost shellscrip]$ ./arithmetic.sh
Enter two numbers: 10 2
sum: 12
sub: 8
mult: 20
div: 5
[soordeen@localhost shellscrip]$ cat evenorodd.sh
#!/bin/bash
read -p "Enter number " n
if ((n%2 == 0))
then
    echo "Sn is even"
else
    echo "Sn is odd"
fi
[soordeen@localhost shellscrip]$ chmod +x evenorodd.sh
[soordeen@localhost shellscrip]$ ./evenorodd.sh
Enter number 6
Sn is even
[soordeen@localhost shellscrip]$ cat date.sh
#!/bin/bash
echo "$(date)"
[soordeen@localhost shellscrip]$ chmod +x date.sh
[soordeen@localhost shellscrip]$ ./date.sh
Tue May 14 20:49:36 PM PKT 2024
[soordeen@localhost shellscrip]$
```
